PROJECTS

Cars Application

🔗 <https://github.com/hristoz2020/cars>

This is a React-based application that enables users to create an account and log in. Once logged in, users are redirected to their personal home page which displays a table. This table allows users to add rows with details about cars such as their make, model, color, price, horsepower and others. The users can also edit or delete existing rows with car data in the table only if they created it.

Technologies: React, Material-UI, Rest API

Beers Application

🔗 <https://hristoz2020.github.io/beer-app/>

React-based application that displays a list of beers which includes an image and a short description about. Users can select their favorite beers and create own list of favorite beers. Application allows users to search for beers by specific keywords. Another interesting feature is the ability to generate a random beer and view its details.

Technologies: React, Bootstrap, Rest-API

Online Shop

🔗 <https://hristoz2020.github.io/store-app/>

Online shop that enables users to create an account and log in. Products page displays all products from different categories with option for search a product by specific keyword. Users can add products to their cart and after that edit selected products or purchase them. The categories page makes it easy for users to find products by category.

Technologies: React, Rest-API
